ACOUSTIC DESIGN SOLUTIONS

ABOUT US

Decibel Designs is a specialized acoustic design studio delivering tailored solutions for spaces where sound matters.

From immersive home theatres to large scale cinemas and professional auditoriums, we design acoustic environments that offer clarity, balance, and exceptional performance.

Our goal is simple – to blend science, creativity, and precision to craft sound experiences that leave a lasting impact.

“ We don't just control sound,
we design experiences. ”

OUR EXPERTISE

Comprehensive acoustic solutions for every space and purpose.

HOME THEATRES

We design bespoke acoustic solutions for dedicated home theatres that deliver immersive sound and visual perfection.

- Room acoustic treatment
- Bass management
- Sound isolation
- Speaker & system integration
- Aesthetic acoustic design

CINEMAS

High performance acoustic design for cinemas that ensures uniform sound distribution and unforgettable experiences.

- Acoustic planning & modeling
- Sound isolation & noise control
- Reverberation time optimization
- Wall, ceiling & seating treatments
- Standards compliant solutions

AUDITORIUMS

We create clear, balanced, and natural acoustics for auditoriums of all sizes and purposes.

- Speech intelligibility optimization
- Acoustic simulation & design
- Echo & noise control
- Wall & ceiling treatments
- Perfect sound for every seat

BETTER ACOUSTICS.
BETTER **EXPERIENCES.**

TECHNICAL KNOWLEDGE. ACOUSTIC INTERIOR.

Sound behaves. We understand how.
Our acoustic interior solutions are based on sound science,
precise calculations and proven materials to deliver
perfectly balanced sound environments.

UNDERSTANDING SOUND

In any enclosed space, sound travels in three ways.

Our goal is to control these reflections to achieve clarity, balance, intelligibility and a natural listening experience.

ACOUSTIC DESIGN PROCESS

RESULT  **BALANCED SOUND • BETTER CLARITY • IMMERSIVE EXPERIENCE**

ACOUSTIC TREATMENTS

A perfect space is a combination of absorption, diffusion and isolation.

PERFECT BALANCE = ABSORPTION + DIFFUSION + ISOLATION

ACOUSTIC INTERIOR ELEMENTS

ACOUSTIC MATERIALS WE USE

ACOUSTIC PERFORMANCE PARAMETERS

KEY DESIGN CONSIDERATIONS

“Great sound is not an accident.
It's the result of scientific design,
precision and the right materials.”

CINEMAS

Designed for immersive audio-visual experiences with precise sound control and minimal distractions.

ACOUSTIC DESIGN CONSIDERATIONS

SOUND ISOLATION

High STC rated walls, doors and floors to avoid external noise interference.

REVERBERATION CONTROL

Optimized RT60 (0.3 – 0.6 sec) for immersive sound.

EARLY REFLECTION CONTROL

Control of first reflections from walls, ceiling & floor.

BASS MANAGEMENT

Bass traps & tuned absorbers for clean, powerful low frequencies.

AUDITORIUMS

Engineered for speech intelligibility, even sound distribution and natural acoustic balance.

ACOUSTIC DESIGN CONSIDERATIONS

SPEECH INTELLIGIBILITY

High STI / C50 values for clear and intelligible speech.

EVEN SOUND DISTRIBUTION

Uniform coverage for every seat without hotspots or dead zones.

REVERBERATION CONTROL

Optimized RT60 as per volume and usage.

BACKGROUND NOISE CONTROL

Low NC levels for better focus and clarity.

CINEMA SEATING & LAYOUT

- Stadium seating for unobstructed views.
- Recommended row rise: 250 – 300 mm
- Row spacing (tread): 900 – 1100 mm
- Aisle width: min. 1200 mm
- Riser with step lights for safety and aesthetics.

AUDITORIUM SEATING & LAYOUT

- Ergonomic seating for comfort during long events.
- Recommended row rise: 150 – 180 mm
- Row spacing (tread): 850 – 1000 mm
- Aisle width: min. 1100 mm
- Proper sightlines & stage visibility for every seat.
